Diagram 2 — Clinician Dashboard

What the OB sees, what powers each view, and how actions flow back to the patient

Patient Panel (50 → 3)

Risk-ranked list · RiskBadge: ok / monitor / escalate

Patient Detail View

Full symptom timeline · 14-day history · BP trend chart

Pattern Alerts

"BP trending up 4 days" · "Headaches 3 of 9 days"

Visit Brief + Conversation Starters

Claude-generated pre-appointment summary · questions to ask

Escalation Inbox (real-time)

Structured clinical summary · WebSocket push · zero-lag

Action Buttons

Message patient · Book sooner · Flag nurse · Add note

GET /api/clinician/panel

Auth (clinician role) → Panel ranking by risk_timeline

Redis

Redis
risk_timeline:{id}

GET /api/clinician/patient/{id}

Reads: symptoms, risk_timeline, session from Redis

Redis

Redis
symptoms:{id}

Pattern Detection Service

detect_pattern() → trends over symptom time-series

Redis

Redis
symptoms:{id}

Arize

Every decision traced + LLM-as-Judge

Claude: Visit Summary

generate_visit_summary() · patient + clinician variants

Anthropic

Anthropic Claude
claude-sonnet-4-6

WebSocket: Escalation Push

GET /api/clinician/escalations · real-time stream

Redis

Redis
escalations:{id}

POST /api/clinician/action

Routes: message → Poke · book → schedule_followup

Poke

Poke
Secure in-app messaging

Web Push

Web Push → triggers escalation inbox notification (zero PHI)

Dashboard UI · Backend Services · Claude / AI · Redis Memory · Poke Messaging · Observability
